Installation... where and how you want.

The methods with which worktops can be built-in have become increasingly more varied and customized. Foster was the first sink manufacturer to have researched and used the new recessing methods and has thus acquired a great deal of experience. It now offers the most comprehensive range available on the market, with flush-mount, flat-edge and undermount installation.

Standard
Traditional built-in with the vertical, 8-mm edge.

Q4
The casing has a square edge that stands on the work surface by just 4 mm. Great solution to match the sink with the ceramic glass hobs (Induction).

Flat-edge
An original edge, with an inclined, 3 mm high profile, matching an extreme elegance with the easiness of installation.

Flush-mount
The product is sunk in 1,5 mm deep recess thus being perfectly flush with the worktop. As alternative, it can be installed on the worktop as well.

Undermount
A classy and contemporary idea, to be installed under the worktop; available in various types of sinks, with soft or square design.

Built-in
Almost the whole range of Foster sinks can be integrated into stainless steel worktops; it is the most elegant and professional solution, that creates a seamless work-surface.

Flush-mount & Flat-edge: a clarification to be done

Many manufacturers indicate as Flat-edge a Flush-mount edge mounted on the worktop.

For Foster Flat-edge means a real alternative built-in solution with an elegant 3 mm sloping edge.

In any case, Foster's Flush-mount models can be mounted on the worktop (FT), thus offering a further built-in solution (FTS).
